1. Claim 2 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

A. The recited melt flow rate of the instant claim 2 is unclear because it does not recite a temperature nor a pressure under which the flow rate is to occur. The ordinary skilled artisan will clearly understand that these factors materially affect this value.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

*(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.*

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

*(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.*

4. Claims 1-13 are rejected under 35 U.S.C. 102(b) as being anticipated by WO 98/46671 Chen.

Chen discloses the instantly claimed combinations of ingredients with the disclosed stearic acid salts falling within the scope of the instantly claimed components c and d and their amounts used in making a golf ball. See the entire document. It is noted that the amounts of the instantly claimed components b and e may be 0 due to the recitation of "100:0" in each component's amount. The instant claim 10 is included in this rejection properly because its proper interpretation is as if claim 10 were written in

independent form with all of the limitations of claim 1 incorporated therein, in which case the amount "100:0" would still be present and therefore claim 10 reads on 0% of the components of claim 10. The polymers of the reference will necessarily have the instantly claimed melt flow rate at some temperature and pressure. The instant claims 4-5 is encompassed at page 4, lines 20-24.

5. Claims 1-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over WO 98/46671 Chen.

Chen discloses the instantly claimed combinations of ingredients with the disclosed stearic acid salts falling within the scope of the instantly claimed components c and d and their amounts used in making a golf ball. See the entire document. It is noted that the amounts of the instantly claimed components b and e may be 0 due to the recitation of "100:0" in each component's amount. The instant claim 10 is included in this rejection properly because its proper interpretation is as if claim 10 were written in independent form with all of the limitations of claim 1 incorporated therein, in which case the amount "100:0" would still be present and therefore claim 10 reads on 0% of the components of claim 10. The polymers of the reference will necessarily have the instantly claimed melt flow rate at some temperature and pressure. The instant claims 4-5 is encompassed at page 4, lines 20-24. It would have been obvious to one of ordinary skill in the art at the time of the instant invention to use the instantly claimed mixtures of ingredients and amounts thereof as the golf ball composition of Chen because such ingredient combinations and amounts thereof are encompassed by Chen and would have been expected to give the golf ball properties disclosed by Chen.
